

# Rationalizing the Denominator

## Why?

In the days before calculators, mathematicians discovered that it was much easier to multiply by a radical than divide by a radical. Therefore, it became customary to always rewrite division of a radical as multiplication.

## When?

We rationalize the denominator whenever there is a radical in the denominator that will not simplify.

## How?

Multiply both the numerator and denominator by a radical that will produce a rational number in the denominator.
